©2001-2005 Mineral Data Publishing, version 1

Crystal Data: Monoclinic. Point Group: 2/m. Crystals are flattened on $\{010\}$, elongated along [100], and obliquely terminated by $\{101\}$, $\{100\}$, $\{10\overline{1}\}$, $\{10\overline{2}\}$; generally as spherulites of bladed to fibrous crystals, to 3 mm.

Physical Properties: Cleavage: Very good on $\{010\}$. Tenacity: Brittle. Hardness = 4.5–5 D(meas.) = 3.15-3.27 D(calc.) = 3.29 Fluoresces blue under LW UV.

Optical Properties: Translucent. Color: White, buff, pale pink. Luster: Silky (fibers), slightly pearly (plates). Optical Class: Biaxial (+). Orientation: Z = b; $X \wedge c = 32^{\circ}$. Dispersion: r > v. $\alpha = 1.590(2)$ $\beta = 1.595(2)$ $\gamma = 1.615(2)$ $2V(\text{meas.}) = 51.5(2)^{\circ}$

Cell Data: Space Group: C2/c. a = 6.52(5) b = 8.75(5) c = 7.51(5) $\beta = 121^{\circ}28(12)'$ Z = 4

$-\overline{O} = F_2$	4.15	4.48
Total	[100.00]	100.00

(1) Nkombwa Hill, Zambia; from an original total of 100.07%, after deduction of 2.14% ankeritic dolomite and 0.99% strontian apatite, then corresponds to $(Ca_{0.98}Sr_{0.03})_{\Sigma=1.01}(Mg_{0.98}Fe_{0.01})_{\Sigma=0.99}$ $(P_{0.98}O_{3.94})[F_{0.93}(OH)_{0.10}]_{\Sigma=1.03}$. (2) $CaMg(PO_4)F$.

Occurrence: A late stage metasomatic mineral in ankeritic carbonatite (Nkombwa Hill, Zambia); replacing wagnerite in a pegmatite dike in sillimanite grade gneiss (Benson mines, New York, USA); an alteration product of triplite in granite pegmatites (Mangualde and Ribeira, Portugal; Horní Slavkov, Czech Republic).

Association: Dolomite, strontian fluorapatite, monazite, daqingshanite-(Ce), strontianite, quartz, phlogopite, pyrochlore (Nkombwa Hill, Zambia).

Distribution: On Nkombwa Hill, 24 km east of Isoka, Zambia. At the Benson Mines, near Star Lake, St. Lawrence Co., New York, USA. From Horní Slavkov (Schlaggenwald), Czech Republic. In Portugal, at the Mangualde pegmatite, near Mesquitela, from Folgorinho, and in the Ribeira and Panasqueira Sn–W deposits. From the Bayan Obo Fe–Nb–RE deposit, 130 km north of Baotou, Inner Mongolia, China. At Brumado, Bahia, Brazil.

Name: For Isoka, Zambia, the town near which the first specimens were collected.

Type Material: The Natural History Museum, London, England, 1957,3 and 1957,4.
